

# Ionic3.x 中的路由导航 NavController 以及路由传值

主讲教师: (大地)

合作网站: <u>www.itying.com</u> (IT 营)

合作网站: www.ionic.wang (Ionic 中文网)

#### 目录

1. ionic	NavController	路由跳转	(不传参)	 1
		7,57,7	.,,,,,	
2. ionic	NavController	路由跳转	(传参).	 2
		,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,		
3. ionic	通过属性路由	跳转(传参	<b>)</b>	3

## 1. ionic NavController 路由跳转(不传参)

1. 需要引入 NavController 模块

```
import { NavController } from 'ionic-angular';
```

2. 申明 NavController

```
constructor(public navCtrl: NavController) {
}
```

3. 引入页面跳转

```
import { AlertsPage } from '../alerts/alerts';
```

this.navCtrl.push(AlertsPage);

4. 具体操作:

```
C:\cordova\ionicTabDemo>ionic g page news
[OK] Generated a page named news!
```

```
<button ion-button (click)='pushButton()'>执行Button
```

```
import { NavController } from 'ionic-angular';

import { NewsPage } from '../news/news';

@Component({
    selector: 'page-accut',
    templateUrl: 'about.html'
})

export class AboutPage {
    constructor(public navCtrl: NavController) {
    }

pushButton(){
    this.navCtrl.push(NewsPage);
}
```

## 2. ionic NavController 路由跳转(传参)

1、需要引入 NavController 模块

```
import { NavController } from 'ionic-angular';

2、申明 NavController (实例化)
  constructor(public navCtrl: NavController) {
  }
```

3.引入页面跳转传参

```
import { ArticlePage } from '../alerts/alerts';
```

```
this.navCtrl.push(ArticlePage , {
   id: "123",
   name: "Carl"
});
```

4. 接收页面传参

引入 NavParmas 模块

```
import { NavParams } from 'ionic-angular';
```

获取传值

```
constructor(private navParams: NavParams) {
  let id = this.navParams.get('id');
  let name = this.navParams.get('name');
}
```

### 3. ionic 通过属性路由跳转(传参)

1. 引入页面定义数据

```
import { LoginPage } from '../alerts/alerts';

constructor(){
  this.pushPage = LoginPage;
  this.params = { id: 42 };
}
```

2. 属性绑定跳转的页面

```
<button ion-button [navPush]="pushPage"></button>
<button ion-button [navPush]="pushPage" [navParams]="params">Go</button>
```

#### 3.获取传过来的参数

```
constructor(private navParams: NavParams) {
  let id = this.navParams.get('id');
  let name = this.navParams.get('name');
}
```
